

## Montana Board of Oil and Gas Conservation Environmental Assessment

Operator: TAQA North USA, Inc.  
Well Name/Number: Hellegaard 9-12H #2  
Location: NW SW Section 9 T37N R57E  
County: Sheridan, MT; Field (or Wildcat) Wildcat (Flat Lake)

### Air Quality

(possible concerns)

Long drilling time: No, 20-30 days drilling time.

Unusually deep drilling (high horsepower rig): Heavy double derrick drilling rig 900-1000 HP (Estimated) to drill a Bakken formation single lateral horizontal well, 10,988' MD/7,798' TVD.

Possible H<sub>2</sub>S gas production: Slight chance H<sub>2</sub>S gas.

In/near Class I air quality area: No Class I air quality area nearby.

Air quality permit for flaring/venting (if productive): Yes, DEQ air quality permit required under 75-2-211.

Mitigation:

☒ Air quality permit (AQB review)

☐ Gas plants/pipelines available for sour gas

☐ Special equipment/procedures requirements

☐ Other: \_\_\_\_\_

Comments: If there are existing pipelines for natural gas in the area then gas must be tied into system or if no gathering system nearby associated gas can be flared under Board Rule 36.22.1220.

### Water Quality

(possible concerns)

Salt/oil based mud: Intermediate string hole will be drilled with oil based invert mud system and openhole horizontal production hole will be drilled with oil based invert mud system. Surface casing hole will be drilled with a freshwater and freshwater mud system.

High water table: No high water table anticipated.

Surface drainage leads to live water: No, drainages nearby. Closest live waters are Widgeon Slough, about 1 mile to the southwest and an unnamed pothole lake, about 1/2 of a mile to the west from this location.

Water well contamination: None, closest water wells in the area are about 1/4 of a mile to the east, 1/2 of a mile to the southwest and 5/8 of a mile to the east, northeast and northwest from this location. Surface hole will be drilled with freshwater and freshwater drilling muds. The surface casing setting depth of 1250' should be below all freshwater zones.

Porous/permeable soils: Yes, sandy clay soils.

Class I stream drainage: No, Class I stream drainages.

Mitigation:

☐ Lined reserve pit

☒ Adequate surface casing

☐ Berms/dykes, re-routed drainage

☒ Closed mud system

☒ Off-site disposal of solids/liquids (in approved facility)

☒ Other: Freshwater drilling fluids will be land applied with surface owner approval.

Comments: 1250' surface casing well below freshwater zones in adjacent water wells. Also, covering Fox Hills aquifer. Adequate surface casing and operational BOP equipment to prevent problems in and around freshwater slough.

### Soils/Vegetation/Land Use

(possible concerns)

Steam crossings: None anticipated.

High erosion potential: No, small cut, up to 2.0' and no fill, up to 0.0', required. Will utilize and existing location for the Hellegard 9-12H well with an added extension.

Loss of soil productivity: None, location to be restored after drilling well, if nonproductive. If productive unused portion of drillsite will be reclaimed.

Unusually large wellsite: No, large well site will utilize the existing wellsite on the Hellegard 9-12 producing well location, but will add a short extension to the southside of the location of 400' X 45' for this new well.

Damage to improvements: Slight, surface use is a cultivated field.

Conflict with existing land use/values: Slight

Mitigation

☐ Avoid improvements (topographic tolerance)

☐ Exception location requested

☒ Stockpile topsoil

☐ Stream Crossing Permit (other agency review)

☒ Reclaim unused part of wellsite if productive

☐ Special construction methods to enhance reclamation

☐ Other \_\_\_\_\_

Comments: Access will use existing county road and existing lease road. Surface hole (freshwater) cuttings will be mixed buried on site. Oil based invert mud cuttings will be trucked to an approved waste disposal facility. Oil based drilling fluids will be recycled to the next location or returned to the mud company's recycling facility. Freshwater surface fluids will be land applied. No concerns.

### Health Hazards/Noise

(possible concerns)

Proximity to public facilities/residences: Closest residences are about 3/4 of a mile to the northwest, 7/8 of a mile to the southeast and 1.25 miles to the southeast from this location.

Possibility of H2S: Yes, slight, Mississippian Formations.

Size of rig/length of drilling time: Heavy double drilling rig 20 to 30 days drilling time.

Mitigation:

☒ Proper BOP equipment

☐ Topographic sound barriers

☐ H2S contingency and/or evacuation plan

☐ Special equipment/procedures requirements

☐ Other: \_\_\_\_\_

Comments: Adequate surface casing cemented to surface with operational BOP stack should mitigate any problems.

### Wildlife/recreation

(possible concerns)

Proximity to sensitive wildlife areas (DFWP identified): None identified.

Proximity to recreation sites: None identified.

Creation of new access to wildlife habitat: No

Conflict with game range/refuge management: No

Threatened or endangered Species: Only species identified as threatened or endangered are the Whooping Crane and Piping Plover. Candidate species is the Sprague's Pipit. NH Tracker site indicates one (1) species of concern: Smooth Greensnake.

Mitigation:

☐ Avoidance (topographic tolerance/exception)

☐ Other agency review (DFWP, federal agencies, DSL)

\_\_\_ Screening/fencing of pits, drillsite

\_\_\_ Other: \_\_\_\_\_

Comments: Private cultivated surface lands. There may be species of concern that maybe impacted by this wellsite. We ask the operator to consult with the surface owner as to what he would like done, if a species of concern are discovered at this location.

### **Historical/Cultural/Paleontological**

(possible concerns)

Proximity to known sites: None identified.

Mitigation

\_\_\_ avoidance (topographic tolerance, location exception)

\_\_\_ other agency review (SHPO, DSL, federal agencies)

\_\_\_ Other: \_\_\_\_\_

Comments: Private cultivated surface lands. There may be possible historical/cultural/paleontological sites that maybe impacted by this wellsite. We ask the operator to consult with the surface owner as to his desires to preserve these sites or not, if they are found during construction of the wellsite.

### **Social/Economic**

(possible concerns)

\_\_\_ Substantial effect on tax base

\_\_\_ Create demand for new governmental services

\_\_\_ Population increase or relocation

Comments: No concerns. Wildcat well within an existing oil field, Flat Lake Field.

### **Remarks or Special Concerns for this site**

Wildcat Bakken formation horizontal well within an existing oil field, Flat Lake Field

\_\_\_\_\_  
\_\_\_\_\_

### **Summary: Evaluation of Impacts and Cumulative effects**

No long term impacts expected. Some short term impacts will occur, but can be mitigated in a short time.

\_\_\_\_\_  
\_\_\_\_\_  
\_\_\_\_\_

I conclude that the approval of the subject Notice of Intent to Drill (does/**does not**) constitute a major action of state government significantly affecting the quality of the human environment, and (does/**does not**) require the preparation of an environmental impact statement.

Prepared by (BOGC): /s/Steven Sasaki
